# MULTIPOINT SECURITY

## The future generation of security locks

With the launch of the **TLP** range of multipoint locks for levers, **TESA** created in the 80's the template for future security locks. Since then, there have been multiple innovations such as antisaw locking bolts, corner piece locks, antidrill escutcheons, improving what already was one of the most complete ranges in the European security market. But things have changed and now it's time to take another quantum leap towards big-time security with the **PLUS** and **PREMIUM** ranges.

## TESA concept for global security

High and low locking points in carbonitrided steel. Carbonitride is a surface treatment that provides extraordinary hardness.

RB03 hinge reinforcements: antisaw and antilever protection

Auxiliary locking points reinforced with a patented no-return system.

Central case with a reinforced device. Optional follower rod and steel latch for RF doors. Also available: PANIC exit device in TLBA, R20AB and TCBA series.

Security escutcheon, anti-extraction and antidrill protection. Tempered steel protection plate in the E700 escutcheon. Tempering provides the inner structure of the material with high antidrill hardness.

Floor strike with antidust protection.

### SPECIFICATIONS:

- Circular roller bolts in the main lock. (Ø14mm. diameter).
- Plane edge roller bolts in auxiliary locks.
- Mechanisms protected in galvanised steel closed cases.
- Floor & Top Jamb locking bolts in hardened steel (TLB5).
- Steel made Floor & Top Jamb strikes. Floor strike includes dust proof lid.
- "U" profile steel faceplate provides great strength and is ideal for Fire Doors.
- Auxiliary locks mechanisms provided with anti-return system.
- Standard height is 2030mm (minimum height 1875). 2300mm height is also available.
- Standard faceplate has a 20x10mm. profile.
- Included escutcheon E700L.

## TLPN Series

### SPECIFICATIONS:

- Carbonitrided steel antilever hooks in auxiliary cases.
- High and low locking points in carbonitrided steel.
- High steel strike and floor strike with antidust protection.
- All devices are protected by closed galvanized steel cases.
- Highly rigid U-type profile steel front. Ideal for RF doors.
- Auxiliary locks mechanisms provided with anti-return system.
- Standard height is 2030mm (minimum height 1875).
- 2300mm height is also available.
- Standard faceplate has a 20x10mm. profile.
- Included escutcheon E700L.

## Face plate

Face plate extensions SPTL10 and SPTL28 allow extending the face plate length up to any door size with mortise multipoint locks without top jamb locking bolt. Using the STLP61LP top jamb locking bolt rod extension allows reaching 2.460mm. in the TLB5 and TLPN5 models.

## RB03-Hinge reinforcement bolts

The RB03 set consists of three pairs of solid steel bolts to be mortised both in the door leaf and frame at the hinged edge of the door. This provides greater protection against saw and crowbar attack. Installation drill bits is included.

RB-03

## Dust Proof floor strike

- Floor strike for bottom locking in TLB5 and TLPN5 series locks.
- It possesses a spring-loaded protective lid that prevents dust from getting into the strike hole.
- Nickel plated finish.

## R200B, R201B & R206B Series

### SPECIFICATIONS:

- Four roller bolts in nickel plated steel. Ø 14mm. diameter.
- Three roller bolts in R201B model.
- Mechanisms protected in zinc plated steel closed case in R200B model.
- R201B has open cases that included top and bottom protective lids.
- Models R201B & R206B included E700L security escutcheon.
- Solid brass faceplate and steel plated strike plate.
- Backset (XX): 50mm and 60mm.

Evolution in mortise locks has led TESA to expand its range constantly, with various backsets, finishes, distances between shafts, latch solutions, PEDs, locks for schools, hospitals, offices...

## A wide range

TESA offers a wide range of mortise locks with various solutions, backsets, distances between shafts, latch solutions, PEDs, automatic projections, functions...

## Finishes

A wide choice of finishes. Guaranteed by TESA, STAINLESS finishes ensure high anticorrosion resistance. Available finishes: painted, nickel, brass...

## UNE-EN 12209 certification

The locks in the institutional range have been certified by the European standard that regulates architectural fittings. This ensures that requisites of durability are met, as well as resistance, security and the right functioning of locks and latches.

## Guaranteed process

Our advanced I+D department is constantly working to improve production processes, providing the market with new, enhanced products that meet the increasingly demanding needs in the market. TESA manufactures all its products with top quality products such as stainless steel, which is employed as the standard material for fronts and strikes.

## Guaranteed by tesa

Buying TESA is a quality guarantee. All our products boast the highest guarantees, such as the ISO 9001 Quality certificate, the environmentally-conscious ISO 14001 and the Occupational Hazard Prevention standard. TESA offers ecologically sustainable quality products, manufactured by highly dedicated staff.

## Components of the lock

### Anticard security device

When we close the door without locking it with a lever, this device prevents the latch from being pushed in from the outside with a card or a radiography.

### Protective antidrill follower rod

It is used in panic exit locks with a double follower rod - this protects the door from attempts of drilling it from the outside and inserting a handle in order to open it.

### Finishes guarantee

# MORTISE LOCK

## Institutional range

### 2S30 Silence series

Hospitals, schools, office buildings, ... deal with intensive public traffic and rough use.

Locks included in the Commercial Range bring together reliability and functionality, and combine also with handles, panic bars, electro-magnetic devices, etc. provided by TESA.

#### Features

- Sashlock for timber doors.
- Reversible latchbolt.
- Distance between axes: 85 mm.
- Backsets: 60 mm.
- Follower: 8 mm.
- Closed lockcase.
- Euro-profile 5 pin cylinder made to DIN V 18254 with 3 nickel plated steel sawn keys. AI finish: nickel finished cylinder.

# CYLINDERS

Global leaders manufacturing cylinders

TESA cylinders are manufactured according to the most advanced production processes, offering an extremely secure high quality product and meeting the requirements of the market demands in every different area.

TESA's range of cylinders includes a great variety of profiles in every system. TESA also offers the possibility of combining mechanical cylinders with access control systems.

## Security

Ranging from the most basic to the highest security patented, restricted-key models, our cylinders have been equipped with the most advanced protection systems: spring loaded pins, antiremoval system, etc., as befits TESA's position as the first European cylinder manufacturer. Our restricted key systems guarantee that no blank keys will be found in the market, thus ensuring protection against counterfeit keys.

## A wide range

We have classified our systems according to four standards:

- Type of key (dimple or sawn)
- Restricted key
- Degree of security
- Masterkeying capacity

The combination of such standards has created a peerless range in the market, covering every requisite in projects ranging from the residential to the institutional, from cost-efficient technical systems to high security patented systems, offering the distributor maximum profitability.

## Masterkeying capacity

All TESA systems can be master keyed. A masterkeying is a planned locking system in which the master key can open more than one cylinder, even if each cylinder has its own key. For offices, residential homes and plants of various sizes, masterkeying is the immediate solution that allows to establish an access control while reducing the number of keys that must be handled: security and comfort.

## Guaranteed by TESA

TESA meets the most demanding European standards for architectural fittings, in which cylinders are very important components in terms of protection and personal safety. Specifically, the EN 1303 European standard establishes five degrees of security (fire resistance, security against breakage, number of combinations, durability and corrosion resistance) for cylinders, based on design requisites and on practice tests simulating an attack.

The DIN standard specifies which standards must be met by cylinders in order to obtain masterkeying certifications. Other standards and certifications met by TESA's cylinders are UL (USA), NEN (Holland) and SS (Sweden).

## Introduction

- » The terminology employed in order to specify the various components that form a cylinder.
- » Selection criteria. The facts we must bear in mind when prescribing a system.
- » Systems. In this part, we will define the features of each model.
- » Profiles and models for particular applications.
- » Masterkeyings. In which we show the most usual diagrams.

	Description
1	Barrel / Shell / Body. Frame which support the assembly.
2	Rotor / Plug. Is the part where the key is inserted to lock / unlock.
3	Cam. Translates the rotating motion of the key into sliding bolt projection.
4	Clutch. Is the component that connects one rotor, in a double cylinder, with the cam.
5	Lower pin (main row). Determines the permutation of the cylinder.
6	Upper pin (main row). Lower pin counterpart.
7	Springs. Load the pinning.
8	Key. Main accesory. Operates the cylinders.
9	Retaining clips. Fix the cylinder in a functional way.
10	Drill-proof body pin. Gives resistance against drilling and mechanical attacks
11	Drill-proof rotor pin. Gives resistance against drilling and mechanical attacks
12	Lower pin (sec.row). Same function as the main row.
13	Upper pin (sec.row). Same function as the main row.
14	Sensor. Part of the patent. Protects the cylinder against different opening methods.
15	Caps. Keep the pinning loaded

## Standard cylinder TE5

Technical data.

TE5 covers the basic segment of the range. Entirely manufactured and assembled in Spain is the most balanced solution for regular and master keyed installations.

Characteristics

- Type: Sawn key. (Steel nickel plated).
- NO. of rows: 1
- NO. of pins: 5
- Technology: Tumbler regular.
- Permutation level: Grade 5.
- Corrosion resistance: Grade B.
- Pick protection: Medium level.
- Lifespan: 50,000 test cycles.
- 3 keys per cylinder.
- Conform to EN-1303 regulation.

Options

- Finishes: Brass / Nickel plated.
- Cam: DIN R15 and R13
- Formats available: Key different, mater keyed, key alike and specific codes.
- Wide measurement and profile range.

Master key systems.

The platform which supports its manufacturing lets combine 10 heights per position. Thanks to that, the TE5 can face master key systems with total working guarantee. Capability graph (Average quantities)

Security

\*

Masterkeying

\*

European standard regulation

In the same way as the main models included in the catalogue, TE5 is certified according to the European standard regulation.

1	5	0	1	0	B	2	0
Key resistance (Grade 0-1)	Lifespan (Grade 4-6)	Door mass (Not applied in cylinder)	Fire resistance (Grade 0-1)	Safety of the people (Not applied in cylinders)	Corrosion and temperature resistance (Grade 0-A-B-C)	Key related security (Grade 1 to 6)	Attack resistance (Grade 0 to 2)

Recommendations

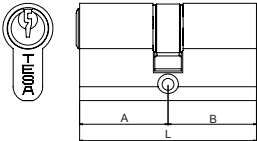

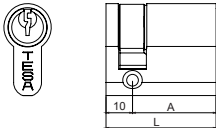

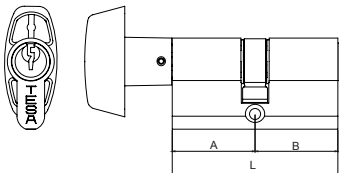

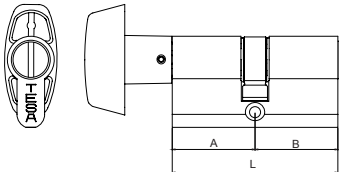

- Use TESA lubricant to lengthen the maximum lifespan of the cylinder.
- Use original keys to make copies.
- For safety reasons, when you install a new cylinder, remember that once installed, it should not project more than 1mm.

## Security cylinder T60

### Technical data.

It is a reversible dimple key system which covers basic security levels.

### Characteristics

- Type: Dimple key. (Brass nickel plated).
- NO. of rows: 1
- NO. of pins: 6
- Combination level: Grade 5
- Technology: Tumbler regular.
- Corrosion resistance: Grade B.
- Anti pick system.
- Drill resistant.
- Bump proof cylinder lock.
- Lifespan: 100,000 test cycles.
- 3 keys per cylinder.
- Conform to EN-1303 regulation

### Options

- Double security clutch.
- Modular. (For unusual measures or anti snap protection)
- Cams: DIN R15, R13 and different pinion gears.
- Finishes: Brass / Nickel plated.
- Formats available: Key different, master keyed, key alike and specific codes.
- Wide measurement and profile range.

### Master key systems.

Appropriated model for those master key suites where the levels of complexity are not too high.

### Security

\*\*

### Masterkeying

\*

### European standard regulation.

T60 is certified according to the standard EN 1303 regulation, getting the following results.

1	6	0	1	0	B	5	0
Key resistance (Grade 0-1)	Lifespan (Grade 4-6)	Door mass (Not applied in cylinder)	Fire resistance (Grade 0-1)	Safety of the people (Not applied in cylinders)	Corrosion and temperature resistance (Grade 0-A-B-C)	Key related security (Grade 1 to 6)	Attack resistance (Grade 0 to 2)

\*Note: with the shield E700 the attack resistance rise to the level 2.

### Recommendations

- Use TESA lubricant to lengthen the maximum lifespan of the cylinder.
- Use original keys to make copies.
- For safety reasons, when you select a new cylinder, remember that once installed, it should not project more than 1mm.

## Security cylinder T80

Technical data.

Reversible dimple key with open key blank distribution.

### Characteristics

- Type: Dimple key. (Nickel silver).
- NO. of rows: 2
- NO. of pins: 8
- Combination level: Grade 6
- Corrosion resistance: Grade B.
- Anti pick cylinder lock.
- Drill resistant.
- Bump proof model.
- Lifespan: 100,000 test cycles.
- 3 keys per cylinder.
- Conform to EN-1303 regulation

### Options

- Double security clutch.
- Modular. (Specially designed for either unusual measurements or anti snap protection)
- Cams: DIN R15, R13.
- Finishes: Brass / Nickel.
- Formats available: Key different, master keyed, key alike and specific codes.
- Wide measurement and profile range.

Security ***	Masterkeying ***
-----------------	---------------------

### Master key systems

The eight position chambers and the possibility of varying side pins makes T80 the most suitable option for those master key systems where the number of key functions is large and the copy control is not required.

### Recommendations

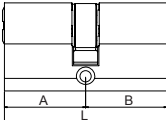

- Use TESA lubricant to lengthen the maximum lifespan of the cylinder.
- Use original keys to make copies.
- For safety reasons, when you select a new cylinder, remember that once installed, it should not project more than 1mm.

## High security cylinder TK6

### Technical data

New model designed to cover two basic necessities in the market. On the one hand has been made with an exclusive and patented combination technology to solve complex master key suites and on the other hand a new security sensor lets the owner control all the keys in one installation.

### Characteristics

- Type: Patented sawn key with security sensor.
- NO. of rows: 1
- NO. of pins: 6.
- Technology: DROP ORBITAL (Exclusive TESA rights)
- Permutation level: Grade 6.
- Corrosion resistance: Grade B
- Anti pick cylinder lock (High resistance.)
- Bump proof system.
- Drill protection grade 1.
- 3 patented keys made of nickel silver.
- Conform to EN-1303 regulation.
- Lifespan: 100,000 test cycles.
- Master key systems: Medium capability in combination with DROP ORBITAL platform.

### Options

- Finishes: Brass / Nickel.
- Cam: DIN R15 and R13
- Formats available: Key different, mater keyed, key alike and specific codes.
- Wide measurement and profile range.
- Colour points to differentiate master key levels.

### Master key system

### European standard regulation

In the same way as the main models included in the catalogue, the TK6 is certified according to the European standard regulation.

1	6	0	1	0	B	6	0
Key resistance (Grade 0-1)	Lifespan (Grade 4-6)	Door mass (Not applied in cylinder)	Fire resistance (Grade 0-1)	Safety of the people (Not applied in cylinders)	Corrosion and temperature resistance (Grade 0-A-B-C)	Key related security (Grade 1 to 6)	Attack resistance (Grade 0 to 2)

\*Note: with the shield E700 the attack resistance rise to the level 2.

### Recommendations

- Use TESA lubricant to lengthen the maximum lifespan of the cylinder.
- TESA recommends to the user of the TK6 to keep the property card in a safe and secure location. Only by presenting this card, can one obtain key and cylinder copies.
- For safety reasons, when you install a new cylinder, remember that once installed, it should not project more than 1mm.

## Stand alone access control

Proximity technology card

STAC12SL1S008VI

STAC12XL1S008VI

Standard

### Electronic lock

- Slim design that allows the installation in every door type.
- Wide range of lever designs and mortise locks.
- Two different aesthetics: long plate or rose handle + independent reader.
- No wirings. Standard battery-powered lock.
- Nor software, neither management devices needed.
- Unlimited nr. of doors, up to 500 different users per door.
- Identity technology: 13,56 MHz MIFARE standard.
- Finishes: Stainless steel.
- Distance between axes: 85mm.
- Square spindle 8 mm.
- All the control components (excepting the reader module) are placed in the inside escutcheon, therefore offering anti-vandalism protection.
- Emergency key override.

### NO SOFTWARE, NO MANAGEMENT EQUIPMENT

CD

PC

ENCODER  
SmartAir

Portable  
programmer

Optional

To order specify X and Y distances (see picture).

- The lock includes one user keycard. Programming and user cards, mechanical cylinder and mortise lock to be ordered separately.
- Mortise locks with standard follower. Split follower can not be used.

Code No.	Description
STAC12SL3V858VI	Standalone lock for inside door, long plate, visible cylinder, vector handle, stainless steel
STAC12XL3V858VI	Standalone lock for external door, long plate, visible cylinder, vector handle, stainless steel
STAC12SC3S858VI	Standalone lock for inside door, short plate, visible cylinder, vector handle, stainless steel
STAC12XC3S858VI	Standalone lock for external door, short plate, visible cylinder, vector handle, stainless steel

## Stand alone access control

Proximity technology card

### Autoprogrammable wall reader

The reader activates the locking element with a relay: electric strike, electromagnetic/motorized lock, etc. 12Vac/Vdc external power supply required.

Connectors	Description
CN1	12Vac/Vdc power supply Standby consumption 80 uA
CN2	Consumption with operating relay: 150 mA
CN3	Relay backset: NO, NC and C. Cut capacity: 5A 250Vac/5A 30Vdc
CLR	RESET button for the erasing of the reader's memory
Operation conditions	Description
Humidity	Up to 85% without condensations
Temperature	-10° - 80°C

Noises of the electric strike: we recommend installing the VARISTOR (which is included in the package) in the electric strike in order to absorb the noises it may produce. ALTERNATING CURRENT ONLY

STAR2PUSSB

STAR2PDSSI

### Mounting diagram

Delivered in a 1/1 box with screws, varistor, power supply and installation templates.

Once connected, and up to the moment when it has been programmed with the programming keycard, the reader is in.

Code No.	Description
STAR2PUSSB	Stand alone universal wall reader
STAR2PDSSI	Stand alone design wall reader

## Stand alone access control

Proximity technology card

### Autoprogr. management kit

In order to start using an autoprogrammable SmartAir access control we require neither costly computer systems nor learning to use complex managements programs. All we need is a Programming card (which identifies an installation, making it different from the rest) and as many cards as users are required by the installation.

TESA has brought together all these elements in a kit, along with a simple tool that performs emergency opening when the system runs out of batteries.

Code No.	Description
STACKITASDW	Stand-alone shadow kit: includes programming shadow card, 24 key cards (12 users, 12 shadow cards) and emergency opening battery.

### Programming card

Its unique, exclusive code will allow to program as many locks as is required by the installation. You can rest assured that no other programming card will be taken into account from that moment on.

The programming card with Shadow function allows to:

- Add users and their shadow cards.
- Add users with option to leave the door in passage mode and their shadow cards.
- Lost card cancellation in the lock through the shadow card.
- Cancel all the users at a time.

Code No.	Description
STACLICSTA	Programming card
STACKICSTASDW	Programming shadow card

### User cards

Ready to be included in the list of users allowed by each door, they will have to be presented to the lock before they've been allowed access.

### Simple functionality

By installing three AAA batteries in this element, and once it has been connected to the lock, we will be able to replace the internal batteries in case the system runs out of them. Once it's been connected, the door will allow access to any authorized card.

Code No.	Description
STACKITEMERG	Emergency opening battery

## Stand alone access control

Proximity technology card

### Program standard users

1. Open programming mode with programming card.
- 2-3. Present 2 user cards one followed by the other (green light will flash faster) the second card will be the shadow card of the first one.
4. Close programming mode (it is also automatically closed after 10 seconds).

Note: If only one user card is presented, the user will not be programmed and it will not have access.

### Program passage functionality user

- 1-2. Open Passage Functionality programming mode placing two times the programming card (lights will flash faster on second approach).
- 3-4. Present two user cards one followed by the other (green light will flash faster) the second card will be the shadow card of the first one.
5. Close programming mode (it is also automatically closed after 10 seconds).

Note: If only one user card presented, the user will not be programmed and it will not have access.

### Start / stop passage mode

Start passage mode

- 1-2. To leave an Smartair Standalone Escutcheon or wall reader in passage mode place two times a Passage Functionality User card (green light will flash).
- 3-4. To finish the passage mode place again two times a Passage Functionality user cards (green light flashing + constant red light).

### Delete one user

1. Open programming mode with programming card.
2. Present the shadow card of the user that wants to be deleted.
3. Close programming mode (it is also closed automatically after 10 seconds).

### Cancel all cards

- 1-2-3. Place 3 times the programming card.

### Opening with low batteries (only escutcheon)

Escutcheon flashes red & green lights approaching a card when batteries are low.

1. Connect the emergency power supply kit.
2. Place a valid user card to open the door and change the batteries of the escutcheon.

## Stand alone access control

Proximity technology card

### Combi key RFID

The RFID COMBI key from TESA allows mechanical master key systems to be compatible with TESA Standalone or other access control systems in only one device or credential. COMBI key can be compatible with mechanical T80 cylinders, furthermore, user will also have access to RFID MIFARE technology electronic lock or wall readers simply approaching the key head.

## Stand alone access control

Electronic key

### Stand alone electronic cylinder

- Quick installation, just as a mechanical cylinder.
- The cylinder has no power supply. The key supplies the energy required in order to open.
- Autoprogrammable system – you just need a programming key and user's keys.
- All the monitoring elements are located inside the cylinder, and therefore protected: control unit, reader and deadbolt device.
- In the outdoors version, the electronic cylinder is resistant to water and to adverse climatic conditions.
- It is possible to have a stock of replacement cylinders that can be easily recorded and integrated with the installation.
- It is possible to combine in one installation TESA's mechanical and electronic cylinders.

### Types of cylinders

All the necessary elements (control unit, reader and motorized clutch) are located in one side of the cylinder, with a minimum length of 35mm.

Version	
Standard	For internal doors
Outdoors (optional)	Water resistance
	All the electronic elements have been silicon-coated and protected with sealing joints. IP54 degree of protection from humidity and condensation.
Lengths	
Minimum	Half cylinder 35x10 mm. (optional) Double cylinder 35 x 35 mm.
Supplements	5mm intervals in any side with a maximum total (for both sides) of 120 mm or 75 mm on one side. Ask for other sizes.
Excentric	
13,2 mm (optional)	Ironwork doors with eccentric lock 13,2
15 mm	Other doors
Finishes	
Nickel

## STX electronic cylinder

**Tesa Electronic Cylinders are elements integrated in the access control system, which are intuitive efficient and both easy to use and install. Ideal for new builds or retrofit purposes.**

### Functionality

- Immediate installation, in the same way as mechanical ANSI profile cylinders.
- Autonomous operation, write-free installation. Key provides energy to open.
- All control elements inside the cylinder offering greater security against vandalism.
- Offers read and write functionality: Events can be stored in the key as well as modifications in the Access plan that can be dumped in the cylinder.
- Possibility to combine in the same installation, electronic cylinders, electronic RFID locks and mechanical cylinders.
- Extreme version: cylinder is resistant to water and adverse weather conditions IP57.

### Electronic Characteristics

#### Reader module:

- Identification via read/write contact chip
- Activation Mode: Cylinder is activated when key inserted. Energy efficient.

#### Control Unit:

- Non-volatile memory
- It can be programed to operate in 3 modes:
  - 1500 users & 600 events
  - 1000 users & 100 events
  - High traffic: unlimited users divided in 48 groups & 600 events

#### Operating conditions:

- Standard: Interior doors
- Extreme: Water resistant IP57

### Mechanical Characteristics

- Minimum length 1¼
- No mechanical pins codification required on the key (only for mechanical cylinders if used).
- Available lengths:
  - 1¼
  - 1½
  - 1¾
  - 2
  - 2¼
  - For other lengths contact Tesa for availability

## Stand alone access control

Pin code

### Easy and convenient

CodeHandle is a set of handles with access control without any cards or keys, simple and effective. Its suitable for any kind of interior door, in residential or institutional environments where comfortable and ease of use its a priority. Code handle is the solution for most of the restricted areas: offices, warehouses, private areas, wardrobe, etc.

#### Attractive design and easy to install

As the keyboard is integrated in the handle is a more attractive option than the wall readers. Also is very easy to install: without cables, without special drills... you can install it as any other handle.

#### Technical features:

- In doors: patented stand alone access control with code for internal door. A complete set is supplied including handles, rosettes, spindle, fixing through bolts and instructions. For 35 - 80 mm door thickness.
- In windows, the handle is supplied with fixing screws and instructions.
- Fits lock cases DIN standard. 8 mm spindle.
- One master code and up to nine different user codes.
- Auto locking function available.
- Two CR2, 3V lithium batteries in the outer handle.
- Visual and acoustic feedback.
- Easy to fit, no cables.
- Available for right- and left hand doors.
- Only for indoor use.
- Material: brushed stainless steel and satin chrome zink.

#### Function:

- Four buttons to press a four- to six digit code to unlock and one button to lock.
- Green light flashes and a sound is heard when the buttons are pressed for unlocking.
- Red light flashes and a sound is heard when locking.
- Master code and user code is programmed at installation. Can be changed unlimitedly.
- If wrong code is pressed five times the handle is blocked for three minutes.
- Free swing from the outside when locked, always possible to open with the handle from the inside.
- The two batteries gives approximately 100,000 operations.
- Red light indicates low battery when approximately 500 operations left

#### Market

CE according to EN 61000-6-1, EN 61000-6-3, EN61000-4-2, EN 61000-4-3, EN61000-4-8

## Stand alone access control

Electronic key

### Electronic key

- Non-volatile memory of the key. No information will be lost when the battery is used up or replaced.
- Protected data prevent the key from duplication.
- One only red authorization key for each installation ensures that only the person in charge of the key will be able to record keys and cylinders.
- Reading and writing contact chip.
- Great capacity for storing and protecting data.
- Encrypted data transmission between the cylinder and the key.

STAXKITSTA	Stand alone kit (programming key + 3 users keys)
STAXLICSTA	Programming key

### User keys

Type	Format	Compatible with	Code No.
TS	Blank	T80	STALXCTSNGNT

## Stand alone access control

Electronic key

### Autoprogrammable management kit

The autoprogrammable cylinder brings you all the advantages and flexibility of the access control offline cylinder while at the same time sidestepping the complications derived from the management devices they include.

The autoprogrammable management Kit includes: a (red) programming card and three (grey) user keys.

#### Users register

1) Start the programming sequence by inserting the (red) programming key in the cylinder. The key's light will shine in red and green colours several times.

2) Insert the key you wish to authorize. The key's light will shine in green, flashing several times.

Repeat steps 1 and 2 for each key you wish to register in the cylinder.

#### Delete users

1) Start the programming sequence by inserting the (red) programming key in the cylinder. The key's light will shine in red and green colours several times.

2) Insert the key you wish to delete. The key's light will shine in red, flashing several times.

Repeat steps 1 and 2 for each key you wish to delete from the cylinder.

#### Erase all

1) Start the programming sequence by inserting the (red) programming key in the cylinder. The key's light will shine in red and green colours several times.

2) Insert for the second time the programming key. The key's light will shine in red, flashing quickly several times. The cylinder is warning us that total erasure is going to take place.

3) Insert for the third time the programming key. The key's light will shine in red permanently for a few seconds. The cylinder is now empty.

## Stand alone access control

Pin code

## Locks for wooden doors

403050AI – Latch lock with 50mm backset with half cylinder  
 30 x 10 mm. 134U5RAI – Latch lock with 50mm backset.

Handle for door	Code No.	Finish	Hand
	MCHIR800	CM	Left
	MCHDR800	CM	Right

### IMPORTANT

To make the emergency opening easier we recommend to install TESA Code handle with a mortise lock with cylinder.

134U5RAI (optional)

## Hands of the doors from the Codehandle side (exterior):

## ENTR™

KEY FREE. BE FREE

- Unlock using your Smartphone
- Self-locking door for peace of mind
- Easy to install

ENTRKIT1T603035

ENTRKIT1T603535

ENTRKIT1T604040

ENTR™ is the revolutionary smart lock solution that allows you to control your door lock from your Smartphone, tablet and other Bluetooth enabled devices

**ASSA ABLOY**

ASSA ABLOY, the global leader  
in door opening solutions

# DIGITAL LOCK

With ENTR™'s App you can lock and unlock your door, right from your smartphone, tablet or other Bluetooth-enabled device, giving you 24/7 control and management capabilities.

- » Uses encrypted Bluetooth smart technology, non-dependent on network reception
- » Receive notifications – locked / unlocked door, battery power level
- » Create virtual keys and program scheduled access authorizations
- » Technical support interface using your smartphone

## ENTR™ Solution Highlights:

- » Ideal for most door types and sizes
- » Easy to install on your existing door – no drilling or wiring
- » Battery operated – not dependent on power or cables
- » Secure, encrypted wireless communication between system elements
- » Automatic locking – shut the door and it will automatically lock

## High Security Access Options

ENTR™ provides you with a variety of devices that give you access control. Select those that best suit your needs and provide you with the most convenience.

## Link arm door closers

### CT500

The CT500 is a door closer that offers good performance in a compact size.

It can drive doors from size 2 to 3. This means that the CT500 will feel comfortable closing doors weighing from 40 to 60 Kg. and up to 950mm. door width.

This capability is achieved in a single model thanks to the variable position installation system.

- Rack and pinion mechanism for smooth and reliable operation.
- Two valves to adjust both sweep and latch speeds separately.
- Two sizes (EN2&EN3) in a single model.
- Reversible.
- Suitable for doors opening inwards or outwards.:  
**Standard mounting:** Door opens INWARDS, mounting on the pull side.  
**Transom mounting:** Door opens OUTWARDS, mounting on the push side.

- Finishes: Silver

Standard mounting:

Transom mounting:

Code No.	Size	Door width mm	Door weight Kg	Opening	Adjustable
CT500	2	850	40	180°	S L
(non hold open)	3	950	60	180°	S L

## Push type panic exit devices

### Universal series

The various functions presented by these serie provide solutions for any type of assembly, both for single and double leaf doors.

All models present the following features:

- Easily reversibility.
- Compatible with firebreak doors.
- External operation with:
  - Modular handle: its European-profile 30x10 mm cylinder makes it fit for installation in doors of varying degrees of thickness.
  - Sena handle: equipped with an adjustable cylinder for 32-to-80 mm-thick doors.
- Narrow support pieces for small size profiles.
- It can incorporate a microswitch.
- Easy to install thanks to:
  - Vertical rod devices are adjusted to 40 mm
  - The horizontal bar can be cut in order to adjust them to the door width.
- Standard finish:
  - Support pieces, vertical rod devices and auxiliary locks in BLACK (RAL 9005).
  - Active bar in GREEN (RAL 6002).
  - Other finish combinations can be ordered:

Auxiliary locks, covers, and vertical rod devices	Horizontal bar

## Push type panic exit devices

### Rim model: 1920

Rim panic device with 2 locking points with steel roller bolts.

Used when a rim strike can not be installed in the lower locking point.

EN 1125 certification:

3 7 6 B 1 3 2 2 A A

The box includes:

- 1 main support and a secondary one.
- 1 oval shape horizontal bar of 900 mm in length.
- 2 vertical rods of 930 mm.
- Accessories bag includes: Fixing screws, screws with support the horizontal bar, 1 square spindle, 2 vertical rod guides and strikes.
- Assembly instructions and installation template.
- 2 locking points, upper and lower.

Code No.	Bar length	Squared spindle mm	Cover finish mm	Bar finish

TE 517-6V-LA

## Internal security

Still using a padlock with a flat key? The external appearance of a padlock is often considered to be more important than what is concealed within. That is why, although many padlocks have a robust external appearance, nobody had thought of using one of the best safety weapons existing for the inside: cylinders for flat keys! TESA has done this and provides you with padlocks which are as secure on the outside as on the inside.

## Masterkeying

Masterkeying enables the same key to be used in different padlocks, irrespective of the fact that each of them has its own key. Thus, maximum comfort and safety is obtained, because a single master key is capable of opening all the padlocks you wish. For offices, houses and companies of different sizes, masterkeying enables you to increase security by reducing the number of keys to be used, and to establish access control.

## TESA guarantees

Quality is assured when you buy TESA products. Here at TESA the very latest technology is used by a creative workforce organised within a management framework which has obtained not only the ISO9001 quality control guarantee but also the environmental certificate ISO 14001 and which delivers an on-going commitment to the very highest of health and safety standards at work.

## Interchangeability

The only padlock in the world which is adapted to your needs. Depending on your security needs or on the goods you wish to protect, our padlocks give you the chance to choose the cylinder you prefer for your padlock and to change it when you wish. In this way you choose the degree of security desired at any given time, because we give you the chance to choose from among the wide range of TESA cylinders.

## Electronic cylinders for access control

Access points which nobody believed could be controlled now under control. The possibility of exchanging cylinders gives a new dimension to padlocks: the chance to insert an electronic cylinder for access control in your padlock and therefore to know who has entered this access point, when and at what exact time. In this way, you can choose to integrate any access point within a comprehensive locking plan, even though the only way of locking it may be by using a padlock. Thus, you will not leave a single access point outside the security system you design.

## Changeable brass series

- Equipment with TESA cylinder system.
- Double security locking mechanism.
- Hardened steel shackle.
- Varnished brass casing for better protection.
- Possibility of keys alike and masterkeying.
- Stainless steel springs.

## Different Types of Master key systems

A master key system is a planned locking system where a master key can open more than one cylinder, even if each cylinder has its own key. For offices, residential homes and blocks of various floors, the master key system is the immediate solution that allows to establish an access control while reducing the number of keys that must be handled: security and comfort.

**Central locking system.**  
(Community type).

**Central locking system with master key.**
